PROJECTS

1. ZenBudget (Fintech Mobile Application)

- **Technologies:** .NET Core Web API, C#, Flutter, PostgreSQL, Redis, Entity Framework Core
- Developed secure and scalable backend services from scratch for a budget management application, adhering to Layered Architecture principles.
- Designed high-performance and user-friendly cross-platform mobile interfaces using Flutter; successfully implemented API integrations and state management processes.
- Optimized CRUD operations for complex financial data through relational database design.

2. Books (E-Commerce Platform - Graduation Project)

- **Technologies:** ASP.NET Core MVC, Web API, C#, Flutter, SQL Server, EF Core

ABOUT ME

I am a senior Computer Engineering student specializing in backend architectures. I have hands-on experience developing end-to-end projects within the .NET ecosystem, with a particular focus on asynchronous programming, layered architecture design, and real-time data management using SignalR. I approach my projects not merely as technical outputs but with a comprehensive 'product' vision—ranging from architectural design and documentation to user experience. As a solution-oriented engineer candidate committed to continuous improvement, I aim to leverage my technical background to drive digital transformation in corporate processes. I am available for full-time roles starting September 2026, to include my mandatory long-term internship through December 2026. (Expected Graduation: January 2027)

EDUCATION

September 2022—Present

Computer Engineering • Selçuk University, Konya

EXPERIENCE

July 2025 — August 2025

Intern FullStack Software Developer • Impress Biliřim • Kadıköy, İstanbul

- Worked on both backend and frontend development using ASP.NET Core MVC.
 - Gained experience with SQL Server, database operations through Entity Framework Core, and LINQ queries.
 - Applied the MVC architecture to build scalable and maintainable systems.
 - Designed user-friendly interfaces and contributed to sustainable projects aligned with layered architecture principles.
- Technologies: ASP.NET Core MVC, C#, SQL Server, Entity Framework Core, LINQ, Layered Architecture

June 2025 — July 2025

Intern FullStack Software Developer • MegaPass • Beyoğlu, İstanbul

- Completed internship in the field of full stack web development.
- Developed backend functionalities using Laravel.
- Built dynamic user interfaces with React.
- Leveraged Inertia.js to achieve smooth and efficient integration between frontend and backend components.

Technologies: Laravel, React, Inertia.js, Full Stack Web Development

- Developed an end-to-end full-stack system encompassing core e-commerce flows such as product listing, cart management, and order cycles. Designed RESTful API endpoints to facilitate seamless data communication between backend and mobile/web interfaces.
- Engineered database queries using Entity Framework Core and LINQ to ensure high performance and data integrity.

3. NoirPay (Digital Check & Payment Ecosystem)

- **Technologies:** ASP.NET Web Api, React, Typescript, PostgreSQL, Entity Framework Core, SignalR, Tailwind CSS
- Developed a robust, multi-tenant backend infrastructure adhering to Clean Architecture and Domain-Driven Design (DDD) principles, utilizing CQRS and MediatR patterns.
- Built responsive client and admin interfaces using React and TypeScript; successfully integrated SignalR for millisecond-level real-time cart synchronization across devices.
- Implemented complex business logic for smart bill-splitting algorithms and live kitchen display systems (KDS) to streamline venue operations and the payment experience

4. Image Processing and Data Transformation (Pixel Manipulation)

- **Technologies:** C#
- Developed algorithms from scratch that operate directly on raw pixel data (byte arrays) without utilizing third-party libraries such as OpenCV. Implemented complex mathematical transformations and data processing workflows, strengthening competencies in algorithmic problem-solving and memory management.

November 2022 — May 2024

Vice President – R&D and Technology Society

- Coordinated the ideation, literature review, and technical reporting phases for 3 separate project teams preparing for Teknofest.
- Assessed the feasibility of proposed projects, reviewed technical reports, and provided constructive feedback to identify areas for logical and structural improvement.
- Organized and facilitated regular brainstorming and progress-evaluation meetings, ensuring effective task delegation and time management across teams.
- Managed internal communication, fostering motivation and cross-functional collaboration among team members with varying skill sets.

TECHNICAL SKILLS

- **Programming Languages:** C#, JavaScript, Dart
- **Frameworks & Libraries:** ASP.NET Core MVC, .Net, React, Flutter, Entity Framework Core
- **Databases:** Microsoft SQL Server, Redis, PostgreSQL
- **Web Development:** HTML, CSS, Bootstrap, MVC Architecture, Responsive Design
- **Tools & Platforms:** Visual Studio, VS Code, Git
- **Concepts:** Object-Oriented Programming (OOP), CRUD Operations, LINQ, RESTful API
- **Methodologies:** Agile, Scrum
- **Office Programs:** Word, Excel, Power Point

ACADEMIC ACHIEVEMENTS

Certificate of Accomplishment Software Engineering Intern | HackerRank | 2026
 Huawei Cloud Developer Basic Training | Huawei | 2026
 Online Commercial Automation with ASP.NET MVC 5 | Udemy | 2025
 Certificate of Honor | Selçuk University | 2023
 Certificate of High Honor | Selçuk University | 2023

SOFT SKILLS

- Strong problem-solving
- Teamwork
- Self-Motivation
- Communication
- Time Management
